YOU ARE IN CHARGE!

The aft emergency generator onboard the USS Midway provided electricity to the ship by converting mechanical energy to electrical energy. However, this limited supply meant only 1/8 of the ship could have electricity at any one time.

Now that you have been aboard the USS Midway and have visited some of its important spaces, YOU can decide which ship’s space in each pair below should receive electricity in the case of an emergency.

**Ship’s Galley** OR **Ship’s Laundry**

**Berthing** OR **Sick Bay**

**Mess** OR **Aircraft Elevator**

**BRIGHT IDEA!** Navy ships are equipped with portable, battery-operated lights for emergency use called battle lanterns. Many of these came on automatically, lighting spaces during a power failure or in the case of an emergency.
