At first their machines did not work.
The brothers kept trying.

When Orville and Wilbur Wright were young, they built kites.

The Wright Brothers' First Flight

The Wright brothers taught other people how to build planes.
They helped change our world forever.
When they were older, they wanted to build a flying machine.

They watched birds to learn how they fly.

One hundred years ago, there were no airplanes.

Finally, they did it! Their airplane flew 120 feet in 12 seconds.
